

## Color of the Month- August, 2008 **X35 Main Street Flashed With Ironspot**

As part of our continuing effort to keep you informed about METROBRICK® products, we are now highlighting a different METROBRICK® color each month via e-mail.

### When you need that extra punch-add Ironspot

**Not every client is going to want the same thing. Wouldn't it be boring if they did?**

All architects are faced with clients that want options. Some want a sleek contemporary feel and others want a more mottled or rustic design.

Our X35 is a very rugged looking finish with ironspot added for additional color and texture. X35 is also random flashed for a more natural appearance. X35 is one of over 200 METROBRICK® color options-**designed to fit.**

When an architect chooses METROBRICK® as the brick finish of choice, she has options, all in a thin brick manufactured to size, to fit liners and panels without cutting or grinding!
