Beads Off

100% Breathable

LONG LASTING HIGH PERFORMANCE WATER REPELLENT

- Aids in Panel Clean Up
- Helps Prevent Staining
- Long Lasting
- Enhances Brick Colors
- Guards Against Deterioration
- Creates an Invisible Protective Barrier
- No VOC/Non-Hazardous/Non Solvent Based
- Designed Exclusively for use with METROBRICK®

METROBRICK® wax now contains MetroGuard™, a new long-lasting, high-performance water repellent. MetroGuard™ penetrates and chemically bonds deep within the brick to provide long-lasting protection against water related staining and deterioration without impairing the brick's natural ability to breathe.

METROBRICK's® wax with MetroGuard™ is a combination of paraffin wax and a solvent-free blend of silanes and siloxanes.

The MetroGuard™ blended wax looks the same and is as easy to remove as untreated wax using a 180° degree pressure washing procedure.

MetroGuard™ is safe and complies with all known national, state and district AIM VOC regulations.

MetroGuard™ enhances the richness of the brick's color and creates a protective hydrophobic surface that causes water to bead off the brick making it easier to clean at the plant and job site.

MetroGuard™ helps protect and keeps buildings in all climates looking good for years to come.

Colors are more vibrant, enhanced and richer when treated with MetroGuard™.

MetroGuard™ has been developed to work exclusively with low absorption METROBRICK® to combat water related brick staining and deterioration.

Brick stains from efflorescence, molds and other water-borne salts and minerals can ruin the look of a building's surface. MetroGuard™ bonds with METROBRICK® on a molecular level to repel water and staining agents from the surface of the brick.

Applied to METROBRICK® Products for use with the following systems:

- Precast Concrete Panels
- Tilt-up Concrete Panels
- Cast in Place Concrete Elements
